

# BRING YOUR STORY TO LIGHT

## Quick Quack Car Wash Fabrication Facility Opens on Schedule with MHB

**Quick Quack is a leading provider of exterior car wash services based in Roseville, CA.** Known for their eco-friendly techniques, such as filtering technology to reclaim 100% of the water used in each cleaning operation, as well as biodegradable and non-toxic soaps and cleansers. In 2021, Quick Quack was the fourth largest car wash chain in the U.S. with nearly 160 locations in Arizona, California, Colorado, Texas, and Utah.

With the rapidly increasing number of Quick Quack locations, they needed to make sure their fabrication facility, where they manufacture their own machinery, was able to open quickly in support of their expansion plans. LSI's collaboration with a key national distributor was a plus to stage the project with Modular High

Bays (MHB) and ensure effective delivery. Quick Quack was so impressed with our design plan and overall proposal that LSI was named the preferred lighting provider for future car wash facilities.

### LSI UPGRADES: Quick Quack car wash fabrication facility

**1** LSI was chosen by key national distributor

**2** New Modular High Bay (MHB) fixtures

**3** Quick Quack was able to open their plant on time, supporting their rapid expansion plans

**4** Quick design turnaround was the ultimate key to success

***"LSI was able to pivot with our changing requirements and design and supply lighting to meet our manufacturing plant's needs, allowing us to open on schedule."***

-Quick Quack Plant Manager

### CHALLENGE

Quick Quack needed ready-to-ship lighting for their fabrication facility on time and within budget.

### SOLUTION

Thanks to a relationship with a national distributor, LSI was able to provide a successful design and proposal for Quick Quack that exceeded all of their requirements.

*The MHB gave Quick Quack's fabrication facility the highly efficient and uniform lighting required of such a large facility on a tight timeline.*
